#691, March 28 - April 3, 2026:

The Weekly 'Unsolvable' Sudoku Puzzle

by **Lars Rocha**, guest compiler

WARNING: This is the Weekly 'Unsolvable' Sudoku, rated above 'Extreme'.
This is currently unsolvable by my solver, except perhaps with trial and error strategies.
Using the solver will not help you. (much).

Changes March 2026

Due to the introduction of Forcing Nets many Weekly Unsolvable puzzles can now be solved. I have flagged all the Sudoku ones which are solvable. I am struggling to make any new ones so we'll have to see if the Weekly can continue. The point of the Weekly was to provoke discussion and new ideas, so that is progress. But my solution is unlikely to be optimal so alternatives are welcome.

Archive

Each week a new 'unsolvable' will be published and the previous will be accessible here from this archive section. If you like very tough puzzles, these are for you.

FRIDAY 10-APR-2026

... by: BGH

I found no pretty & logical solution to this one.
I confirmed Yves 3/29 1st solution
and Dieter's solution.

The only way I got there was just trial & error... hence no pretty & logical solution for me.

A FIRST!!

TUESDAY 31-MAR-2026

... by: Yves

There is a rare candidate elimination in this #691.

It's part of the "Path Analysis logic" (See X-Cycles) and it can be state as follow :

If a candidate Path On or Off is not compatible With both Path On And Off of any other
cells candidates then :
If On path the candidate can be remove,
If Off path it become Solution.

In #691

If H3=2 is On (Solution) Then the Candidate 2 in H7 cannot be On and cannot be Off
=> The candidate 2 in H3 is eliminate

If H3= 2 On Then =>H7=2 cannot be On (Same Line)
In H3= 2 ON path; J6=2 is On (Solution)
In H7=2 Off path; J6=2 is Off (Not solution)
So H3=2 is not compatible with both path H7=2 On And H7=2 Off

Same with

If H2=2 ON Then 2 in H7 cannot be On and cannot be Off
If J2=2 On Then 2 in H7 cannot be On and cannot be Off
If J3=2 On Then 2 in H7 cannot be On and cannot be Off

=>The candidates 2 in H3, H2, J2, J3 are removed

SUNDAY 29-MAR-2026

... by: Anonymous

Opps my bad I don't check my answer before pisting yesterday, it was incorrect

SUNDAY 29-MAR-2026

... by: Yves

One from too many Two Cells solutions ...

D9=6 AND [A5=4 OR B5=2 OR B8=4 OR C1=2 OR C6=9 OR G2=2 OR G3=3 OR H2=4
OR J6=2 OR J7=4]

SATURDAY 28-MAR-2026

... by: Dieter

#691 - initially populated cells: 23 = 28,4 %

No solver used, solver = brain.

basics: G4=1

populated cells: 24 = 29,6 %

Strategy: numbers 1,7,2,8 occur most frequently, combine two cells.

combinations of D9 = (1,4,6,8) and F8 = (4,7,8,9)

after basic checks 7 matrices left: start with D9/F8 = 6/9 as it is most populated.

D9/F8 = 6/9 solves with B8=4.

Optimization:

B8=4 & D9=6 solve.

SATURDAY 28-MAR-2026

... by: Serban

691 Basics to 24

1. G3=J8=3 solve

2. B8=E9=4 solve

3. D9=J1=6 solve

SATURDAY 28-MAR-2026

... by: osiguy

Absolutely diabolical Andrew! I must place two answers first

1 R4C3=2 [D2B]

2 R4C5=3 [D2B]

Once i place these, then using expert approved techniques the board no longer stalls in the solver! Does anyone have any other placements as the first two that can open up for a full solver path!

Diabolical!
